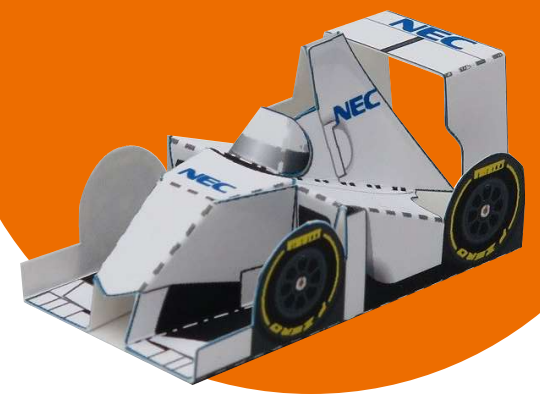
1 Decide how many laps to race.

Decide the laps to race before starting the game. The more laps you set, the longer you can enjoy the game . Up to 8 laps can be set. After you have decided the laps to race, put the ping in the lap scale on top of the pit building.

2 2. Set your cars on the starting grid (starting position)

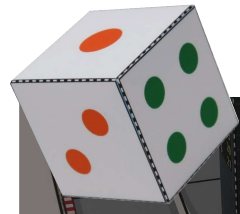
First, each roll the dice, and set your car on the starting grid in descending order. If the number is the same as those of other players, roll the dice again.

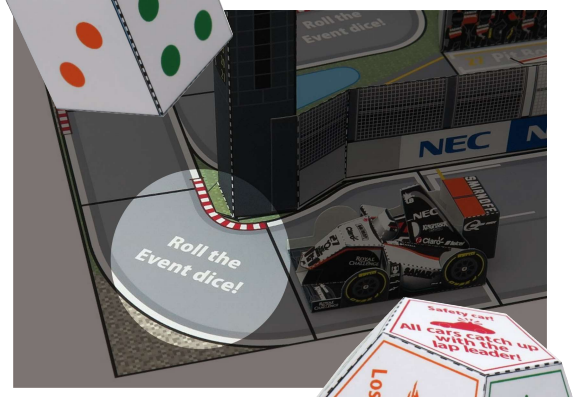
This white paper-crafting set enables you to create your own original car! Paint it as you like!



3 Start the race!

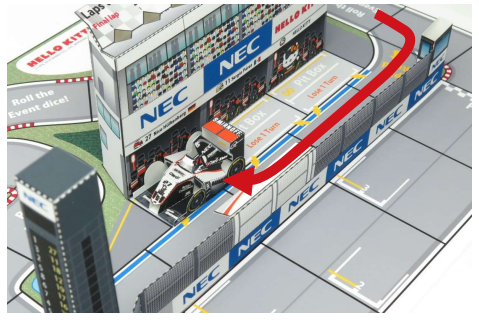
Roll the dice starting with the pole-sitter (player at the top of the starting grid) . Move spaces indicated by the dice.
If other player's car is in the space your car goes to, stop your car in the space right before that space.





Roll the Event dice!

When your car stops at the "Roll the Event dice!" space, roll the Event dice. The player must act in accordance with the description on the Event dice.



4 Goal! Who's the winner!?

Every time the leader passes the finish line, move the ping of the lap scale to reduce the remaining laps . After entering the final lap, the player whose car passes the FINISH LINE first is the winner!
